Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 106

Abrasion
An investigation of the abrasive and erosive wear of flame-sprayed coatings, 54
Abrasive jet
A manufacturing tool for a new century, 112
Advanced structural materials
Development problems of materials in mechanical engineering, 184
Agents
Agents as building blocks of responsibility-based manufacturing systems, 219
Alloys
New trends in the development of mechanical engineering materials, 230
Aluminium
Mechanical and tribological properties of aluminium-base composites produced by the recycling of chips, 23
New methods of aluminium and aluminium-alloy chips recycling, 34
Aluminium alloys
New methods of aluminium and aluminium-alloy chips recycling, 34
Aluminium–bronze
Mechanical and tribological properties of aluminium-base composites produced by the recycling of chips, 23
ANN
Comparison of two methods for the analysis of composite material, 87
Applications
New development of shear fracture research, 267
ART
The applications of ANNs in certain materials-analysis problems, 74
Artificial neural networks
The applications of ANNs in certain materials-analysis problems, 74

Bearing material
Mechanical and tribological properties of aluminium-base composites produced by the recycling of chips, 23
Biomaterials
Mechanical features of biocomposites containing porous corundum grains, 136
Boundary element method
Application of the boundary element method for the numerical modelling of the solidification of cylindrical and spherical castings, 99
Bridges
Advances in materials applied in civil engineering, 173

Carbon fibres reinforced polymer
Advances in materials applied in civil engineering, 173
Carbon steel
Warm deformation of carbon steel, 123
Ceramic fibres
Technology and mechanical properties of ceramic preforms for composite materials, 119
Ceramic preforms
Technology and mechanical properties of ceramic preforms for composite materials, 119
Ceramics
New trends in the development of mechanical engineering materials, 230
Change of the initial configuration in the axial and transverse directions
The effects of torsion on the initial geometry of bars having non-circular cross-sections, 8
Changes in length
The effects of torsion on the initial geometry of bars having non-circular cross-sections, 8
Characteristics of materials
A new model describing the hot stress–strain curves of HSLA steel at high deformation, 131
Chips
Mechanical and tribological properties of aluminium-base composites produced by the recycling of chips, 23
Civil engineering materials design and optimisation
The applications of ANNs in certain materials-analysis problems, 74
Coating
Determination of the frictional properties of coated steel sheets, 107
Cold forging
Analysis, evaluation and compensation of component-errors in the nett-forming of engineering components, 204
Complex stress state
Analysis of the thermal fatigue process, 167
Composite material
Comparison of two methods for the analysis of composite material, 87
Composite materials
The production and application of metal matrix composite materials, 58
Technology and mechanical properties of ceramic preforms for composite materials, 119
Composites
New methods of aluminium and aluminium-alloy chips recycling, 34
Infiltration of the metal through a bundle of continual fibers, 163
New trends in the development of mechanical engineering materials, 230
Composites development
The production and application of metal matrix composite materials, 58
Computer integrated manufacturing
Agents as building blocks of responsibility-based manufacturing systems, 219
Computer simulation
Flow-stress functions for the computer simulation of metal forming, 45

Concrete
Advances in materials applied in civil engineering, 173
Concrete-like composites
The applications of ANNs in certain materials-analysis problems, 74
Constant equivalent temperature
Analysis of the thermal fatigue process, 167
Constitutive equation
The constitutive equations for FEM analysis, 40
Copper alloys
Grain size evolution model of selected copper alloys bases on new methods of softening kinetics determination, 243
Cutting
Temperature reduction in the cutting zone in water-jet assisted turning, 68
Cylindrical bars
Infiltration of the metal through a bundle of continual fibers, 163

Damage
Analysis of the thermal fatigue process, 167
Damping capacity
High damping functional materials prepared by spray deposition, 94
Die elasticity
Analysis, evaluation and compensation of component-errors in the nett-forming of engineering components, 204
Dies and machines for metal forming
Present and future developments of metal forming: selected examples, 236
Ductility and fracture of metals and alloys
Development problems of materials in mechanical engineering, 184

Erosion
An investigation of the abrasive and erosive wear of flame-sprayed coatings, 54
Error analysis
Analysis, evaluation and compensation of component-errors in the nett-forming of engineering components, 204
Evaluation
Determination of the frictional properties of coated steel sheets, 107
Extrusion
Physical and mathematical modelling of extrusion processes, 2
High damping functional materials prepared by spray deposition, 94

Failure mechanism
Analysis of the thermal fatigue process, 167
Finite element simulation
Problems of multi-step forming sheet metal process design, 152
Application of a system for sheet metal forming design, 159
Finite element analysis of a tailored blanks stamping process, 254
Implementation of the forming limit stress diagram in FEM simulations, 261
Finite-element method
Finite-element simulation of large plastic deformation, 223
Flexible cross-rolling
Present and future developments of metal forming: selected examples, 236
Flow formulation
Finite-element simulation of large plastic deformation, 223
Forces
Temperature reduction in the cutting zone in water-jet assisted turning, 68
Forming defects
Identification and classification of flow-dependent defects in the injection forging of solid billets, 199
Forming force
The calibration of metal-forming presses, 28
Forming limit stress diagram
Application of a system for sheet metal forming design, 159
Implementation of the forming limit stress diagram in FEM simulations, 261
Forming-limit stress curve
Use of two behaviour laws for the determination of the forming-limit stress diagram of a thin steel sheet: results and comparisons, 49
Fractal Company
Transition processes: a survey of German industry, 141
Fracture toughness
Mechanical properties and microstructure of ULCB steels affected by thermomechanical rolling, quenching and tempering, 212
Friction
Determination of the frictional properties of coated steel sheets, 107
Factors influencing friction in steel sheet forming, 250
Functional materials
High damping functional materials prepared by spray deposition, 94

Grain size
Grain size evolution model of selected copper alloys bases on new methods of softening kinetics determination, 243

Hard-facing
An investigation of the abrasive and erosive wear of flame-sprayed coatings, 54
Heat resistance and damaging of materials
Development problems of materials in mechanical engineering, 184
High pressure
A manufacturing tool for a new century, 112
High strength concrete
A new generation of concrete in civil engineering, 80
Advances in materials applied in civil engineering, 173
High-performance concrete
Advances in materials applied in civil engineering, 173
High-pressure cooling
Temperature reduction in the cutting zone in water-jet assisted turning, 68
Hybrid presses
Present and future developments of metal forming: selected examples, 236
Hydraulic bulging
Present and future developments of metal forming: selected examples, 236

Industrial application
Problems of multi-step forming sheet metal process design, 152
Injection forging
Identification and classification of flow-dependent defects in the injection forging of solid billets, 199
Intercritical region
Controlled hot forming of heat treatment steel grades in the intercritical (γ–α) region, 13

Laser welded blank
Finite element analysis of a tailored blanks stamping process, 254
Linear regression method
Comparison of two methods for the analysis of composite material, 87

Machining
A manufacturing tool for a new century, 112

Manufacturing methods
Rapid tooling: the state of the art, 191
Mathematical modelling
Physical and mathematical modelling of extrusion processes, 2
Mechanical properties
Mechanical features of biocomposites containing porous corundum grains, 136
Mechanical properties and microstructure of ULCB steels affected by thermomechanical rolling, quenching and tempering, 212
Metal forming
The constitutive equations for FEM analysis, 40
Identification and classification of flow-dependent defects in the injection forging of solid billets, 199
Metal matrix
Infiltration of the metal through a bundle of continual fibers, 163
Metal matrix composites
The production and application of metal matrix composite materials, 58
Microconcrets
Mechanical features of biocomposites containing porous corundum grains, 136
Microstructure
Mechanical properties and microstructure of ULCB steels affected by thermomechanical rolling, quenching and tempering, 212
Microstructure evolution
Finite-element simulation of large plastic deformation, 223
Model
Grain size evolution model of selected copper alloys bases on new methods of softening kinetics determination, 243
Factors influencing friction in steel sheet forming, 250
New development of shear fracture research, 267
Modelling
Flow-stress functions for the computer simulation of metal forming, 45

Nett forming
Analysis, evaluation and compensation of component-errors in the nett-forming of engineering components, 204
Network organizations
Transition processes: a survey of German industry, 141
New techniques
Present and future developments of metal forming: selected examples, 236

Offshore structures
Advances in materials applied in civil engineering, 173
Optimization
Finite-element simulation of large plastic deformation, 223

Perturbation method
Implementation of the forming limit stress diagram in FEM simulations, 261
Physical modelling
Physical and mathematical modelling of extrusion processes, 2
Plastometric test
Flow-stress functions for the computer simulation of metal forming, 45
A new model describing the hot stress–strain curves of HSLA steel at high deformation, 131
Press deflection
The calibration of metal-forming presses, 28
Press-behaviour characterisation
The calibration of metal-forming presses, 28
Properties of preforms
Technology and mechanical properties of ceramic preforms for composite materials, 119

Quenching and tempering
Mechanical properties and microstructure of ULCB steels affected by thermomechanical rolling, quenching and tempering, 212

Rapid prototyping
Rapid tooling: the state of the art, 191
Rapid tooling
Rapid tooling: the state of the art, 191
Present and future developments of metal forming: selected examples, 236
Recycling
Mechanical and tribological properties of aluminium-base composites produced by the recycling of chips, 23
New methods of aluminium and aluminium-alloy chips recycling, 34
Research
New development of shear fracture research, 267
Responsibility-based systems
Agents as building blocks of responsibility-based manufacturing systems, 219
Restructuring processes
Transition processes: a survey of German industry, 141

Self-piercing riveting
Present and future developments of metal forming: selected examples, 236
Shear fracture
New development of shear fracture research, 267
Shear localization
New development of shear fracture research, 267
Sheet metal forming
Problems of multi-step forming sheet metal process design, 152
Application of a system for sheet metal forming design, 159
Finite element analysis of a tailored blanks stamping process, 254
Silicon steel sheet
Determination of the frictional properties of coated steel sheets, 107
Solidification of metals and alloys
Application of the boundary element method for the numerical modelling of the solidification of cylindrical and spherical castings, 99
Spray deposition
High damping functional materials prepared by spray deposition, 94
Steel
Advances in materials applied in civil engineering, 173
Steel grades
Controlled hot forming of heat treatment steel grades in the intercritical (γ–α) region, 13
Steel sheet
Factors influencing friction in steel sheet forming, 250
Strain
Use of two behaviour laws for the determination of the forming-limit stress diagram of a thin steel sheet: results and comparisons, 49
Strain rate
Grain size evolution model of selected copper alloys bases on new methods of softening kinetics determination, 243
Strength
Development problems of materials in mechanical engineering, 184
Stress
Use of two behaviour laws for the determination of the forming-limit stress diagram of a thin steel sheet: results and comparisons, 49
Warm deformation of carbon steel, 123
Stress–strain curves
A new model describing the hot stress–strain curves of HSLA steel at high deformation, 131

Structure
A new generation of concrete in civil engineering, 80
Warm deformation of carbon steel, 123
Superalloy — CMSX3
Infiltration of the metal through a bundle of continual fibers, 163

Tall buildings
Advances in materials applied in civil engineering, 173
Temperature
Grain size evolution model of selected copper alloys bases on new methods of softening kinetics determination, 243
Thermal fatigue
Analysis of the thermal fatigue process, 167
Thermomechanical rolling
Mechanical properties and microstructure of ULCB steels affected by thermomechanical rolling, quenching and tempering, 212
Thermomechanical treatment
Controlled hot forming of heat treatment steel grades in the intercritical (γ–α) region, 13
Thixoforming
Present and future developments of metal forming: selected examples, 236
Tool temperature
Temperature reduction in the cutting zone in water-jet assisted turning, 68
Torsion of bar
The effects of torsion on the initial geometry of bars having non-circular cross-sections, 8
Turning
Temperature reduction in the cutting zone in water-jet assisted turning, 68

ULCB steels
Mechanical properties and microstructure of ULCB steels affected by thermomechanical rolling, quenching and tempering, 212

Vacuum metallurgy
Infiltration of the metal through a bundle of continual fibers, 163
Vault-structured parts
Present and future developments of metal forming: selected examples, 236

Warm deformation
Warm deformation of carbon steel, 123
Water jet
A manufacturing tool for a new century, 112
